As we continue to do our best to adapt to the changes presented to us this school year, we are proud of how our school community has handled the first few weeks back in the classroom. Our student body, a resilient and determined group of learners, were delighted to reconnect with the teachers and staff they have come to know as family and were welcomed with the enthusiasm they deserve.

Walking through the buildings, students were observed wearing face coverings, adhering to new rules for movement in the hallways and classrooms, using technology during instruction to improve their computer literacy, and most importantly ENJOYING THEIR DAY. When asked if they were happy to be back at school, a group of third grade students enthusiastically replied, ‘YES! I missed my school and couldn’t wait to come back!’ The sentiment was echoed by other students who were thrilled to be back in the comfort and familiarity of their classrooms, and the warmth therein, created by the staff who care so deeply for your children.

Again, we encourage you to remain vigilant and assist us in keeping our school community healthy. We are only as strong as our foundation, and the foundation of our success at school are the families we serve. Thank you for your continued support!
Please be certain all face coverings meet the requirements communicated by your child's school. At this time, the only coverings that your child may NOT wear, per district policy, are Exhalation Valve Masks. (Bandanas are prohibited at the high school level only, per the dress code)

Cloth masks, surgical masks, and gaiters are allowable coverings.

“A CONTACT OF A CONTACT IS NOT A CONTACT”

Case
Self-isolate until no longer infectious

Contact
Self-quarantine for 14 days after last known exposure

Contact of a contact
No public health recommendation

A case is considered infectious for 2 days before their symptom onset until at least 10 days afterwards. They must also be fever free for at least 24 hours without fever-reducing medications and have an improvement in other symptoms. If a case is asymptomatic, specimen collection date should be used to evaluate the infectious window.

- Close contact: Spending at least 15 minutes within 6 feet of a person with confirmed COVID-19, or a direct exposure to possibly infected droplets of saliva or nasal mucus (e.g., begin sneezed or coughed on in the face).

- Self-Isolation: Individual with signs or symptoms of COVID-19, or a positive test, stays home until no longer infectious for at least 10 days since the onset of symptoms and until at least 24 hours have passed with no fever (without fever-reducing medications) and with improvement in other COVID-19 symptoms.

- Self-Quarantine: Individual without symptoms stays home for 14 days since last exposure to someone who was diagnosed with COVID-19 (the incubation period of the virus).
